

## FOR IMMEDIATE RELEASE

### ECOLEDLIGHTING UNVEILS NEW INNOVATIONS AT ARC 08

**11 February 2008 – Sunbury, UK:** On stand **M39b** at ARC 08 EcoLEDLighting is delighted to announce it will be previewing the new ECOLED-60 - a 600 x 600 recessed LED luminaire for corporate, small office, education, and a broad cross section of commercial environments.

This ground-breaking concept is the first ceiling panel luminaire to achieve Part L Compliance, producing over 50 Lumens per circuit watt and a total light output of over 5,000 Lumens. It combines energy-efficiency and high performance lighting in one easy-to-install package.

The ECOLED-60 is a direct replacement for any standard ceiling panel luminaire and is available in combinations of 300mm<sup>2</sup> sizes. Fully compliant with LG3 & LG7, it will appeal to M&E consultants, lighting designers and facilities managers in the office refurbishment sector, who want to improve carbon footprint and product life-cycle costs easily and without compromising luminaire performance.

In contrast to comparable fluorescent luminaries, the ECOLED-60 is mercury free, has no associated disposal costs and is guaranteed for six years. Suspended and dimmable options are available.

*Visit stand M39b to discuss your requirements.*

The company will also be showing their range of LED downlights; the first BSI-tested luminaires to comply with Part L 1 (A&B) and 2 (A&B) of the UK Building Regulations. The MR16-type LED replacements offer a similar light output / footprint to existing technology but consume 80% less energy and dramatically reduce radiated heat (a full 85% cooler) in comparison to a conventional MR16 luminaire.

EcoLEDLighting will be also showcasing their popular emergency handrail and stairway lighting range. Enclosed within a hardwearing steel balustrade / handrail assembly, the luminaire is self-contained and mains-powered with battery backup in the event of power failure. They effectively light stairs, floors, exits and corridors in any emergency situation.

The new range of LED downlights designed specifically for installation in lifts and elevators are an environmentally friendly, low heat and low energy replacement for conventional in-ceiling elevator downlights. EcoLEDLighting lift lighting offers increased energy cost savings, and reductions in air-conditioning costs as well as installation and maintenance. The fittings are supplied in installation-friendly kit form.

EcoLEDLighting has over 30 years combined LED lighting technology, design and implementation experience in the commercial and military aerospace industry. The company's designs and products reflect this experience. All products are 100% recyclable, durable, state-of-the-art and suitable for any project where energy cost, ambient heat reduction and ultimate durability are key requirements.
